Abstract (Basic): EP 939516 A2

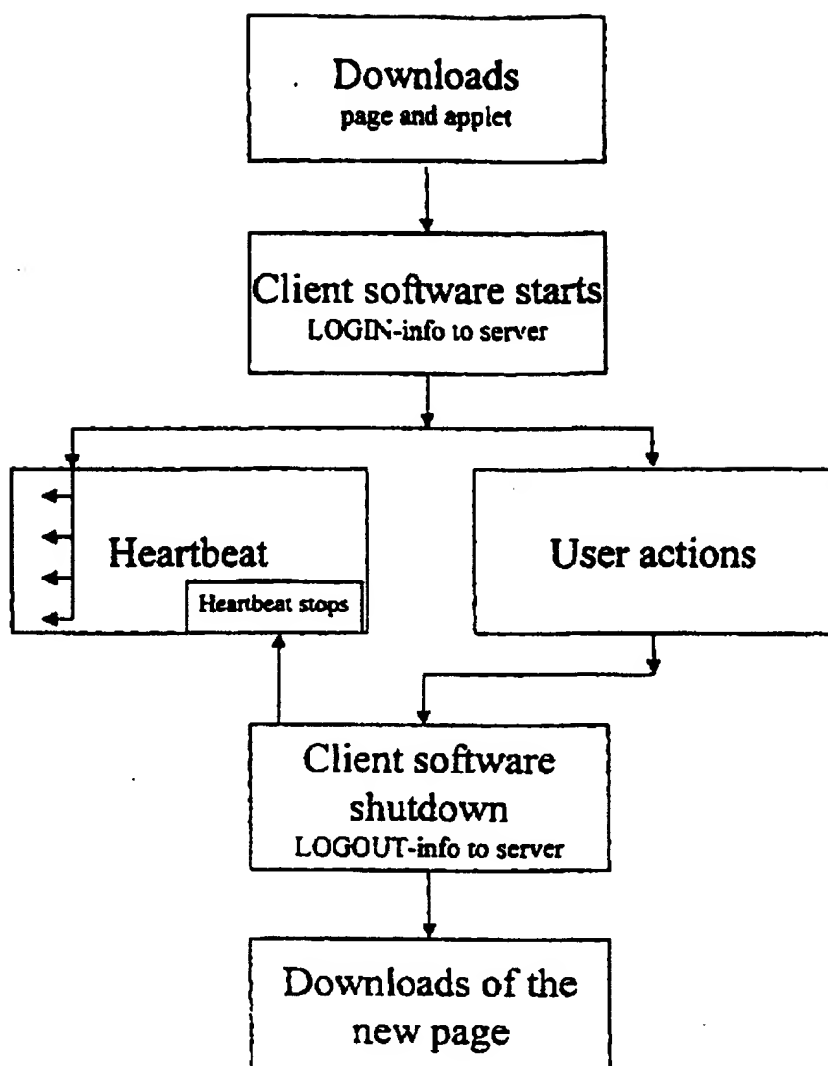

NOVELTY - Using system client and host computers have support for so called applet software, where downloaded file can be embedded by applet program, launched by certain user's browser actions, especially actions on browser page. Applet program can communicate with the host computer and send starting information as well as periodic pulses, so called heartbeats, and the host records this information.

USE - For providing user communication and monitoring system for computer networks such as the Internet.

ADVANTAGE - Generates ongoing real time user information that is not vulnerable to interrupted communication, such as machine crashes and network breakdowns.

DESCRIPTION OF DRAWING(S) - The drawing shows a model of an UCMS client software, such as an applet.
